## AV Service Offerings

Having an AV team as part of your existing IT services partner is like giving your healthcare organization a tech superboost, with benefits such as:

**Comprehensive Support:** Benefit from unified tech support for both AV and IT services, streamlining your healthcare facility's operations.

**Enhanced Focus on Patient Care:** Our integrated AV and IT services allow your team to dedicate more time to patient care, reducing technical distractions.

**Simplified Technology Management:** Achieve optimal performance from your healthcare technology with streamlined support, eliminating the need to manage multiple service providers.

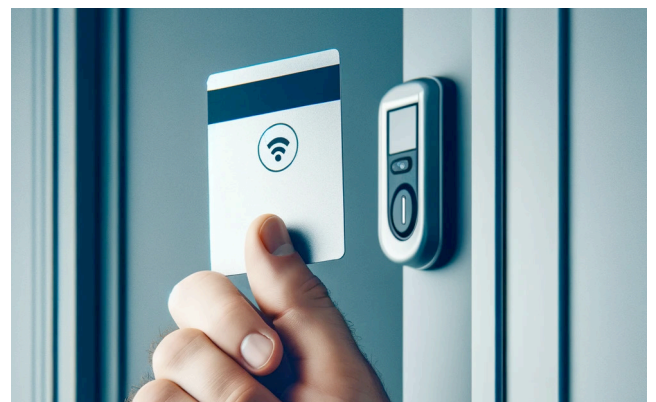

### Communication and Collaboration

- **Video Conferencing:** Remote consultations and collaborative medical team meetings.
- **Paging Systems:** Enables efficient communication throughout large medical complexes for quick staff mobilization and patient care coordination.
- **Microphones:** Essential for telemedicine, patient interviews, and documenting clinical encounters, ensuring clear communication and record-keeping

### Security and Monitoring

- **Surveillance:** Increases security and safety in medical facilities by monitoring public areas, entrances, and restricted zones, ensuring a safe environment for patients and staff.
- **Access Control:** Secures sensitive areas within healthcare facilities, such as medication storage or patient records, ensuring that only authorized personnel can access them.

## Patient Experience and Comfort

- **Multi-Zone Audio:** Allows for the distribution of calming music or important announcements across different areas of a healthcare facility, improving patient experience and staff coordination.
- **White Noise/Background Noise:** Masking disruptive sounds for patient relaxation and privacy.
- **Digital Signage:** Provides dynamic wayfinding, patient education, and health information display, improving communication and engagement within healthcare facilities.
- **Outdoor AV:** Enhances outdoor areas of healthcare facilities with wayfinding, announcements, and ambient music.

## Infrastructure and Management

- **Structured/Data Wiring:** Ensures reliable and organized telecommunications infrastructure, supporting critical healthcare technologies and data management needs.
- **Power Control:** Provides reliable power management and protection for medical devices, ensuring they operate without interruption for patient safety and care continuity.
- **Network Racks:** Organizes and protects critical network and IT infrastructure in healthcare facilities, supporting telemedicine, electronic health records, and other digital health technologies.
- **AV Control Systems:** Integrates and manages various AV technologies in healthcare settings, streamlining operations and enhancing patient care through efficient control.
- **Smart Room Scheduling Panels:** Streamlines the booking and management of consultation rooms and facilities, reducing wait times and improving the efficiency of healthcare services.

## Environmental Monitoring

- **Temperature Monitoring:** Ensures critical areas such as patient rooms, storage spaces for medication, and labs are kept at optimal conditions, safeguarding patient health and medical supplies.
- **Lighting Control:** Automation and optimization of lighting levels, enhancing patient comfort and reducing energy costs.

## Education and Training

- **Pro-Audio:** Delivers high-quality sound for medical education, training simulations, and patient information sessions, enhancing learning and communication.
- **Video Distribution:** Facilitates the sharing of medical imaging and educational content across multiple displays, supporting diagnostics, treatment planning, and staff training.
- **Projector Systems:** Useful in educational and training environments within healthcare facilities, enabling large-scale visualization of medical procedures and findings.
